# FOREWORD

This index lists all reviews published in Volumes 21-28, 1960-1964, of MATHEMATICAL REVIEWS. The index is alphabetic; most items are listed according to the author's surname. Items without a personal author are listed by editor or alphabetically by title.

## NAME VARIATIONS

Over the years many authors have used different variations of their names. In order to collect in one place all the works by a particular author a system of primary names has been adopted. An author's primary name is simply the one name variation which MATHEMATICAL REVIEWS has chosen on the basis of frequency and currency of usage. It is this primary name which is used to determine an author's place in the alphabetic listing. The other variations of an author's name are indicated in parentheses after the primary name at the beginning of an author's listing. These secondary variations are also in the alphabetic listing with a reference to the primary name, with the notation "See." Occasionally a name is given with the notation "=" followed by a name form. This notation indicates that the name form following the equals sign is the primary name but that this author does not have any reviews in this index.

## JOINT AUTHORS

Joint works are listed under the first-named author. When an author has collaborated with another person who is given as the first, or primary, author, there is a reference to the primary author in the secondary author's entry, given in parentheses following his primary name or name variations. Thus, the first part of an author's entry will look like this: Primary surname, primary first names or initials (Name variations) (Primary authors with whom this author has collaborated).

## ARRANGEMENT OF ENTRY

Within each author's entry, arrangement of titles is primarily by order of nominal publication date. All works which that author has done by himself are listed first, chronologically, followed by joint works. Joint works are grouped first by number of authors and then within those groups arranged alphabetically by the second author's name, then the third, and so on. If the primary author has written more than one item with a given secondary author or group of secondary authors, the works are arranged chronologically beneath the authors' names. Thus within an author's entry come all single authored works, then double authored works arranged alphabetically by second author's name, then triple authored works, etc.

The arrangement of each title entry is given as it was published in MATHEMATICAL REVIEWS. If the title has been cited in any language other than the language in which the work was originally written, the original language is given in parentheses after the title. Book and monograph titles may be quoted both in the original language and in English.

The general form for title entries is as follows:

*Books, Monographs*: Title. Miscellaneous information (edition, series, etc.). Publisher, city, date. Pagination. Review number.

*Journal article*: Title of article. Journal abbreviation (series number) volume number (volume number in first series if given) (nominal date), issue number if necessary, first page-last page (imprint date). Review number.

The first part of the review number refers to the volume in which the review was published and the second part refers to its number within the volume. If there are two review numbers following an entry, the second one is usually an erratum. (Note: for abbreviations of journal titles refer to volume index issues.)

## ENTRIES WITHOUT AN AUTHOR

Entries without a personal author are listed alphabetically by editor or title. An individual article in a collection is listed under the author's name only if it was reviewed individually; otherwise the collection alone is listed. Related items, such as regularly held symposia, may be listed in several places if they do not have a fixed author or editor.

## TRANSLITERATION

Names and titles originally in Russian or Chinese have been transliterated. Because the systems of transliteration have varied over the years, the alphabetic listing contains extensive cross-referencing between the systems in order to aid the reader in locating a given author. As Chinese has proved to be the more confusing and intractable, it is dealt with here in a special section.

## NAMES OF CHINESE AUTHORS

The spelling in MR of the names of Chinese authors has been influenced by many different systems of transcription, the most important being: the *Pinyin*, officially adopted in 1958 by the government of the People's Republic of China, the *Wade-Giles*, invented by Sir Thomas Wade in 1859, and the *Cyrillic* transcription used by most Russian scientific editors to represent Chinese names (reproduced here, see the comparative table below, in the standard MR transliteration of Cyrillic).

A Chinese name consists of a monosyllabic surname, which in the Chinese language is always put first, and two (or rarely, one) monosyllabic given names; in English it is customary, but by no means invariable, to hyphenate the two given names and not to capitalize the second of them, thus:

Hua Luo-geng (Hua Lo-keng)

This manner of writing the Chinese name (Pinyin, followed by Wade-Giles in parentheses) is standard in the Society's cover-to-cover translation of the Chinese journal Acta Mathematica Sinica, which in the original gives the Chinese characters followed by Pinyin.

In the MR indexes the primary form of the name is taken to be "Hua, Loo-Keng" in view of the fact that in many early articles written in English (e.g., MR 2-150) the author signed his name in this way. But there are cross-references from numerous variants. For example, in MR 19-731 the author's name is given as Hua Lo-Kèn, the standard MR transliteration of the Cyrillic in which the name appears at the head of an article published in the USSR. But in another article, also written in the Russian language but appearing in a journal published in Peking, the Chinese editors have chosen a Cyrillic spelling which is transliterated in MR 22-8421 as Hua Lo-gèn.

Since many other Chinese names show similar variants, we give here a comparative table of all possible Chinese syllables in the three transcriptions:

# Corrections and Additions
# to the
# 20-Volume Author Index of Mathematical Reviews
# 1940-1959

The following is a list of corrections and additions to the first printing of the index to the first 20 volumes of Mathematical Reviews. A second printing of that index, published in 1966, incorporates some of these corrections in the text.

## Part 1, A-K

| Name | Page | Col. | Line | |
